

# REMORA

## FULL TIME & INTERNSHIP OPPORTUNITIES - MICHIGAN

Help build carbon capture for semi-trucks.

Remora's device captures at least 80% of a semi-truck's carbon emissions directly from the tailpipe. We sell the CO2 to end-users who can store it away for a long time. We split that revenue with our customers, so the device pays for itself in just a couple years.

We just opened our engineering summer internship, and for folks with more experience, we're hiring full-time software engineers, mechanical engineers, and electrical engineers.

If you want to help tackle the defining challenge of our time, apply now at: [remoracarbon.com/jobs](https://remoracarbon.com/jobs).

Story about our work in the Wall Street Journal:
