

Share your ME course experiences, earn \$20

Is your engineering education preparing you for the career you want?

We are a group of engineering education researchers at the University of Michigan studying Mechanical Engineering students' course experiences and how the content of those courses relates to their own interests and career goals. We are inviting you to complete a survey as part of this study because you are a ME major at Purdue University. Your insights and experiences will contribute to our understanding of engineering training across institutions and ultimately help ensure it best meets the needs and interests of students across engineering programs. We will email you a \$20 virtual gift card as compensation for completing the survey. A link to the survey is here: https://umich.qualtrics.com/jfe/form/SV_5i3VlaYhjpHHGc

The survey will take you approximately 15-20 minutes and will ask you questions about your interests in engineering, your engineering courses and the types of engineering work they emphasize, and your current career thinking. Your identity will be kept confidential within the research team, and your individual answers will not be shared with your instructors. Please feel free to contact eng-course-study@umich.edu with any questions you may have.

We greatly appreciate your participation!

Shanna R. Daly, Ph.D.

Associate Professor, Mechanical Engineering and Engineering Education

Joi Lynn Mondisa, Ph.D.

Associate Professor, Industrial and Operations Engineering and Engineering Education

Lisa R. Lattuca, Ph.D.

Professor, Higher Education and Engineering Education

Erika Mosyjowski, Ph.D.

Assistant Research Scientist, College of Engineering Undergraduate Education

Hayley N. Nielsen, M.A.

Ph.D. student in Higher Education, Graduate Student Research Assistant
